

The proponent committed to preserving this area. But they have not as they have cut down **all** the trees adjacent to Muskoka Road 169, north of the bridge.

This view is labelled "Potential to re-establish view corridor from road", but they would not as the view would only be of the shoreline, not down the Moon River as is required.

The proponent states this area would be for portaging. This would encourage people to canoe through the treacherously-turbulent water exiting their proposed generating station, as this dangerous water would extend **outside** of their proposed downstream saety boom.
